

The Day I Was Almost Knifed, in Broad Daylight

When a very powerful spy agency declares an ordinary person as their No.1 enemy, then only God can protect such a person, and save him from being killed. I know that I am only alive because of grace of the Almighty Lord.

Since Mossad has been on my case for many years, I have learnt plenty about their tactics. For instance, I have learnt about the type of people - Unknowing Associates - they use to perform various activities for Mossad.

I have explained in an earlier article how 4 years ago, Mossad pressured a doctor to deliberately misdiagnose me.

Most doctors wouldn't agree to deliberately misdiagnose someone, regardless of the tactics used to intimidate them, and in fact, would most likely report the person pressuring them to do that.

So, how did Mossad do it, and made sure the doctor wouldn't report them to the authorities?

I have discovered that Mossad has studied behaviours of people/communities/nations from around the world, and grouped them into various categories - e.g. "this category of people, if one of them is a doctor, we can easily manipulate him/her to do a,b,c; but we wouldn't be able to manipulate people in these categories to do that, without risking being found out..."

"This category of people, we can easily manipulate them to stab our subject; but we wouldn't be able to manipulate people in these categories to do that, without risking being found out..." etc.

Mossad has made me know a lot of things that most people do not know about them; Information that I never set out to know about.

Consequently, I use the information I have learnt from Mossad to boost my chances of remaining alive. For instance, a few years ago, I was supposed to undergo a certain procedure in hospital.

I met the doctor who was to do the procedure, and he informed me of the day I was to return to hospital for the procedure.

That doctor had the profile of the type of doctor Mossad would use to do whatever they wanted. Naturally, there was no way I was going back for that appointment. I used excuses to cancel the appointment.

NOTE: The profile of the doctor is not what most people would expect. In fact, I believe that, if 100 doctors from various backgrounds were lined up, including 1 who fits the “Mossad profile”, and random people asked to select the one Mossad would use to misdiagnose or even kill patients, 99.9999% of people would fail.

That is how good Mossad is. They use people you wouldn't expect. That is why they are so successful.

It is also important to note that these UNKNOWING people Mossad uses are not bad people. They are ordinary people who nevertheless get manipulated to do criminal acts, believing they are doing it to make the world better.

How is this possible?

I will use an analogy: Suppose you know that a certain person has kidnapped 2 young children, and is hiding them in his house. Suppose you also know that the kidnapper is not giving the children food or water.

Suppose you also know that the authorities are hiding behind “red tape”, and are refusing to do anything about it...

Under the circumstances, there are many ordinary citizens who would take it upon themselves to save the children, and even kill the kidnapper, if necessary.

A resourceful, criminal spy agency would only need to convince someone that the events above are real, if they want a manipulatable person to kill an innocent man, believing he is doing it for the common good.

That is how Mossad operates. Using these kind of tactics, they make good people commit criminal acts for them.

In the example above, most people wouldn't believe that it is possible that the authorities could let the kids die. However, a few people would believe it. The advantage Mossad has is that they know exactly the kind of people who would believe the story.

Through Mossad activities around me, I have also come to know about the type of persons they are most likely to use to do A,B,C against me. I then use this knowledge to minimise risk to myself.

Obviously, I cannot eliminate Mossad's dangers towards me, I can only lower the risk.

Knife Attack

A few months ago, I went to a certain store in a shopping centre not too far away from home. It was during daytime. I parked my car about 10 metres from the store, and walked towards the entrance.

I saw a certain lady standing a few metres from the entrance. She was talking on her mobile. Although there were other people around, within a fraction of a second, I figured that the lady was there because of me i.e. she had been sent by Mossad. (Yes, Mossad follows me around, and have done so for years)

Within one second, I had noticed that the lady fit the profile of someone Mossad would send to do something that would inconvenience me at the store.

I am used to these kind of tactics, so I would still go ahead and buy whatever I was buying, while trying to make sure the inconveniencing tactics don't succeed, if possible.

Anyway, the woman did not enter the store, as I had expected. She just went on speaking on the phone.

I went into the store, bought what I needed, and walked out. I had walked about 3-4 metres from the store's exit when some guy suddenly appeared in front of me, begging for "a few coins".

In these kind of situations, you have to think and act very, very fast.

I have never seen a real beggar blocking someone. Yet, this guy was not only blocking me, he was very close to me, occupying my personal space.

I immediately side-stepped him, and walked quickly towards my car. He followed me briefly, but I entered my car and quickly closed the door. The guy then walked away.

The fact that the "beggar" followed me briefly, proved that he was no real beggar. There were other people 5-10 metres away he could have gone to beg from, after I ignored him. But he didn't do that.

I saw his hand press something sharp in his jumper, as he walked away. I knew then what was going on.

I continued observing him, and surprise! He walked straight to the lady I had noticed earlier - the one on the phone. The woman-on-the-phone had by now walked away from the store, about 20 metres away.

They chatted furiously, no wonder cussing for not succeeding in doing what they had been paid to do.

This is what I believe was happening:

Mossad was observing my movements, inside and outside the store, using various cameras. Mossad agents OUTSIDE Australia were watching these cameras and talking to the woman-on-the-phone - using an untraceable phone with a number disguised as an

Australian phone number - guiding her about where I was, and what she was supposed to do...

The woman-on-the-phone was probably using hand gestures to guide the guy-with-the-knife.

NB: I believe the woman-on-the-phone was talking to Mossad agents abroad because Mossad would know if the plan succeeded, the lady on the phone would quickly be found to be a co-suspect in the murder.

Therefore, they would make sure there would be no traceable connection between Mossad and the 2 would-be killers. The 2 would probably have been recruited through their local drug-supplier, who in turn, wouldn't know the real name or contacts of the person who made him hire the 2 would-be killers.

The woman-on-the-phone and the guy-with-the-knife, both fit the profiles of people Mossad would use for such a criminal activity.

They were probably made to believe that, if the guy-with-the-knife was positioned very close to me, the store camera wouldn't capture the knife attack, since I would be blocking the view.

They were also probably convinced that, since there was some talking between us, he would be able to claim self-defence...Get 1-2 years in prison, then come out to enjoy the \$500,000 they would be paid, in cash.

Obviously, the woman-on-the-phone and the guy-with-the-knife would both be selected by Mossad because, apart from having the right profile for the job, they would be daft enough to believe that the self-defence story would be bought by anyone.

Also, both would almost certainly be drug-addicts.

Anyway, I survived that day.

I also survived another dangerous plot about 1 month before the store incident.

Due to these 2 incidents, I have adjusted my routine, to minimise risk.

DR. DAVID RUSSELL-WEISZ
